DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 4-20, 24 & 25 allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record teach all the limitations of claim(s) 1 & 12 except for the limitation "*wherein the plurality, of rotating plates of the first open/close part is configured to rotate upwardly in a direction opposite to a location of the fan and the plurality, of rotating plates of the second open/close part is configured to rotate upwardly in a direction toward the location of the fan when the air is directed upwardly by the fan during cooling so that the space communicates with the refrigerating chamber and the freezing chamber simultaneously, and wherein the plurality, of rotating plates of the first open/close part is configured to rotate downwardly toward the location of the fan and the plurality, of rotating plates of the second open/close part is configured to rotate downwardly in a direction opposite to the location of the fan when the air is directed downwardly by the fan during the defrosting so that the space is prevented from communicating with the refrigerating chamber and the freezing chamber simultaneously.*" The prior art of record (Kopko, US 6,286,326) discloses a refrigerator that allows flow of cold air to a freezer compartment while limiting air to a refrigerator compartment when a fan rotates in one direction, and allows flow of cold air into the refrigerator compartment while preventing air from flowing into the freezer compartment, but not *wherein the plurality, of rotating plates of the first open/close part is configured to rotate upwardly in a direction opposite to a location of the fan and the plurality, of rotating plates of the second open/close part*

Art Unit: 3784

is configured to rotate upwardly in a direction toward the location of the fan when the air is directed upwardly by the fan during cooling so that the space communicates with the refrigerating chamber and the freezing chamber simultaneously, and wherein the plurality, of rotating plates of the first open/close part is configured to rotate downwardly toward the location of the fan and the plurality, of rotating plates of the second open/close part is configured to rotate downwardly in a direction opposite to the location of the fan when the air is directed downwardly by the fan during the defrosting so that the space is prevented from communicating with the refrigerating chamber and the freezing chamber simultaneously. Although it is well known to provide a refrigerator that allows flow of cold air to a freezer compartment while limiting air to a refrigerator compartment when a fan rotates in one direction, and allows flow of cold air into the refrigerator compartment while preventing air from flowing into the freezer compartment, there is no teaching in the prior art of record that would, reasonably and absent impermissible hindsight, motivate one having ordinary skill in the art to modify the teachings of the prior art to incorporate the limitation “*wherein the plurality, of rotating plates of the first open/close part is configured to rotate upwardly in a direction opposite to a location of the fan and the plurality, of rotating plates of the second open/close part is configured to rotate upwardly in a direction toward the location of the fan when the air is directed upwardly by the fan during cooling so that the space communicates with the refrigerating chamber and the freezing chamber simultaneously, and wherein the plurality, of rotating plates of the first open/close part is configured to rotate downwardly toward the location of the fan and the plurality, of rotating plates of the second open/close part is configured to rotate downwardly in a direction opposite to the location of the fan when the air is*

Art Unit: 3784

directed downwardly by the fan during the defrosting so that the space is prevented from communicating with the refrigerating chamber and the freezing chamber

simultaneously.” Thus, for at least the foregoing reasons, the prior art of record neither anticipates nor renders obvious the present invention as set forth in claim(s) 1 & 12.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kim et al. (US 4,614,092).
